Pump Supplier To The World

Flowserve is the driving force in the global industrial pump marketplace. No other pump company in the world has the depth or breadth of expertise in the successful application of pre-engineered, engineered and special purpose pumps and systems.

Pumping Solutions

Flowserve is providing pumping solutions which permit customers to continuously improve productivity, profitability and pumping system reliability.

Market Focused Customer Support

Product and industry specialists develop effective proposals and solutions directed toward market and customer preferences. They offer technical advice and assistance throughout each stage of the product life cycle, beginning with the inquiry.

Dynamic Technologies

Flowserve is without peer in the development and application of pump technology, including:

- Hydraulic engineering
- Mechanical design
- Materials science
- Intelligent pumping
- Manufacturing technology

Broad Product Lines

Flowserve offers a wide range of complementary pump types, from pre-engineered process pumps, to highly engineered and special purpose pumps and systems. Pumps are built to recognized global standards and customer specifications. Pump designs include:

- Single stage process
- Between bearing single stage
- Between bearing multistage
- Vertical
- Submersible motor
- Rotary
- Reciprocating
- Nuclear
- Specialty

CPX Family of ISO Chemical Process Pumps

Unmatched Versatility and Flexibility

The CPX family of ISO chemical process pumps offers a wide range of configurations including mechanically sealed, magnetically driven, self-priming, close coupled and vertical pumps. The CPX family, therefore, offers unmatched flexibility and breadth of pumping solutions in countless applications.

Spare Parts Interchangeability

Commonality among the different pump configurations is a key benefit of the CPX family. All CPX pumps share the same state-of-the-art hydraulics, sealing options, and bearing frame options. This interchangeability translates into inventory and maintenance costs savings.

Industries

- Chemical
- Steel and primary metals
- Marine
- Wastewater treatment
- Aquariums
- Mining works
- Semiconductor manufacturing
- Pharmaceuticals
- Petrochemical

Complementary Pump Designs

- Mark 3 ASME (ANSI) chemical process pump
- PolyChem PFA lined series of sealed or sealless ISO, ASME (ANSI) or JIS pumps
- GRP ASME (ANSI) non-metallic chemical process pump

**CPX
ISO Standard
Overhung,
Single Stage
Chemical Process
Pump**

The Standard for Chemical Processing

The Flowserve CPX process pump conforms to ISO 2858 dimensional and ISO 5199 design criteria. Offering state-of-the-art hydraulics, the CPX pump is designed for applications where high performance, high efficiency and low NPSH are required.

The advanced design and precision manufacture of the rugged CPX provide significant performance enhancing benefits that help users to maximize mean time between planned maintenance (MTBPM) and to reduce operating costs.

Applications

- Acid transfer
- Caustic and chlor-alkali
- Man-made fibers
- Polymers
- Slurry processing
- Solvents
- Volatile organic compounds
- Waste processing

Operating Parameters

- Flows to 1400 m³/h (6160 US gpm)
- Heads to 220 m (720 ft)
- Pressures to 25 bar (365 psi)
- Temperatures from -80°C (-110°F) to 350°C (660°F)
- Discharge sizes from 20 mm (3/4 in) to 200 mm (8 in)

Standards Compliance

The CPX is CE marked and compliant with applicable European directives, such as ATEX.

Advanced 45° Conical Seal Chamber with integral vortex flow modifiers increases mechanical seal life

Standard Non-Contacting Labyrinth Seals keep lubricant in and contaminants out

Heavy-Duty Pump End and Drive End Bearings selected for long life and reliability

Heavy-Duty Casing with integral foot and multi-ribbed discharge flange provides superior resistance to pipe loads and improves reliability

External Three Bolt Rotor Adjustment allows impeller clearances to be reset in situ, thereby restoring head and efficiency

One-Piece, Ductile Iron Bearing Housing is designed for safety, maximum concentricity, strength and alignment

Back Pullout Design allows removal of rotating element without removing casing, piping or motor

Precision Cast, Semi-Open Impeller delivers high efficiency performance and low NPSHR. Standard impeller material is Duplex stainless steel, the strength and hardness of which significantly extend the life of the impeller.

Benefits of CPX Semi-Open Impellers Versus Closed Impellers

- Adjustability of rotor enables head and efficiency to be restored in situ
- Improved solids handling
- Suitable for a wider range of applications
- Improved seal chamber environment in low NPSH applications
- Smooth entrance profile minimizes snagging of fibrous materials

Reliability and Performance Enhancing Features

- Precision cast, semi-open impeller with backvanes and shroud cutouts for axial balance reduces maintenance and downtime costs by extending mechanical seal and bearing life
- Precision machined, metal-to-metal inter-connecting faces at the casing, seal chamber and bearing housing for reliable sealing and optimum concentricity
- Robust, solid shaft ensures less than 0.05 mm (0.002 in) deflection at the seal face and low L^3/D^4 ratio, thereby extending mechanical seal life
- Elimination of gaskets avoids leakage and crevice corrosion

Optional Jacketed Casing

An optional jacketed casing is available for those applications in which the pumped fluid must be heated or cooled to maintain optimal fluid viscosity.

Low Flow Sizes

The CPX is also available in eight low flow, high head designs. Engineered specifically to cover flows lower than ISO 2858, these low flow pumps eliminate the need for throttling and the associated premature failure.

Additional benefits of low flow CPX pumps:

- Lower initial pump cost
- Smaller motor sizing
- Reduced energy costs
- Greater reliability

Additional Features

- Standard splash guard
- 3 mm (0.12 in) minimum corrosion allowance
- Magnetic drain plug
- Bull's-eye sight glass

**CPX
45° Seal Chamber
Technology**

Advanced Technology Seal Chamber

The CPX 45° conically shaped seal chamber with integral flow modifiers is designed to redirect solids and slurry away from the seal, back into the flow path of the process liquid.

- Extends seal life
 - Self-venting
 - Self-flushing
 - Self-draining
- Reduces maintenance and repair costs
- Provides a safer environment for personnel
- Permits use of less expensive seal and flush plans
- Improves pump reliability

45° Conical Seal Chamber Provides Design Flexibility

- Accommodates single, double and tandem seal arrangements
- Accepts single and double cartridge seals to latest ISO or DIN standards
- Accepts Eccentric Pumping Annulus (EPA) circulation system, a wide range of flush plans, and auxiliary systems for maximum reliability
- Provides optional jacketed seal chamber for effective heat transfer in the seal chamber area or across the entire surface area of the process fluid

Flow Modifiers Extend Mechanical Seal Life

- Redirect flow from circumferential to axial, thereby reducing turbulence and abrasion
- The mechanical seal creates a centrifugal action, pushing suspended solids away from the seal faces and into the return flow created by the modifiers
- Solids and slurry merge into the returning flow path and are flushed out of the seal chamber
- Balanced flow with low pressure drop in the chamber helps keep solids in suspension, minimizing erosive characteristics

Optional Integrated Solid Seal Cover

An integral solid seal cover eliminates crevices where corrosion could occur or where potential contaminants could collect, while reducing the parts count.

**CPX
Mechanical Seals**

The CPX 45° conical seal chamber accommodates many seal types including single, double and tandem arrangements.

The double and tandem seals are available for more severe and environmentally sensitive applications.

All seals can be backed up by a range of flush plans and auxiliary systems.

Conventional single and double cartridge seals can be fitted in accordance with the manufacturer's standard or with those designed to meet the latest ISO or DIN standards.

External seals and gland packing are optional, as is the seal housing jacket which controls the seal environment.

Single seal with external throttle bush and controlled drain

Single seal with external lip seal

Single internal seal with internal PTFE neck bush and PTFE throttle bush

Double back-to-back seal with EPA circulation

Tandem seal with EPA circulation

Double cartridge tandem seal

**CPX
Heavy-Duty
Shaft and
Bearings**

CPX shafts and bearings are designed to improve pump reliability. The robust and stiff solid shaft ensures less than 0.05 mm (0.002 in) shaft deflection at the seal face and low L^3/D^4 ratio to maximize mechanical seal life.

Shaft Materials

To meet application requirements shafts are available in a wide range of corrosion-resistant materials, including:

- 316 stainless steel
- Duplex stainless steel
- Alloy 20
- Alloy C
- Alloy B

Bearing Options

As standard the CPX is supplied with a deep groove ball bearing and double row angular contact thrust bearing providing life in excess of the minimum specified by ISO 5199.

As an optional upgrade, the CPX can be supplied with a deep groove ball bearing and reinforced duplex, back-to-back angular contact thrust bearing, providing L10 bearing life in excess of 50 000 hours.

Oil Lubricated Bearing Housing “splash bath” uses bull’s-eye sight glass with magnetic drain plug as standard with constant level oiler as an option.

Grease Lubricated Bearing Housing facilitates maintenance by using grease nipples fitted at the pump end and drive end. Alternatively, sealed-for-life bearings can be fitted.

Additional Options

- Sealed-for-life bearings
- Additional condition monitoring points
- Tappings for instrumentation and monitoring equipment
- Bearing isolators
 - Standard or proprietary, non-contact designs
- Oil mist lubrication technologies

Optional non-contacting vapour block bearing isolators

**CPX
Parts and
Materials**

Flowserve Parts

Flowserve parts should be specified for all pump maintenance requirements.

In addition to improved maintenance savings only Flowserve offers:

- Parts that are guaranteed to fit, last and perform
- 24-hour emergency service
- Application and materials expertise
- Complete analysis and performance of your maintenance needs with recommended parts inventory and management, if so required

Flowserve foundries are widely regarded as among the world's best. They routinely pour alloys from common austenitic stainless steels to light reactive alloys such as titanium and zirconium.

Attesting to the world class quality of its castings, Flowserve was the first high alloy foundry in the United States of America to have earned approval by Germany's Technischer Uber-wachungs Verein (TUV).

**CPXS
Magnetic Drive
Pump**

Leak-Free Pumping

The CPXS magnetic drive process pump provides leak-free pumping of hazardous, toxic, flammable, explosive or valuable liquids.

Conforming to ISO 2858 dimensional and ISO 5199 design criteria, the CPXS magnetic drive pump is found wherever reliability in severe services is a requirement.

Standards Compliance

The CPXS is CE marked and compliant with applicable European directives, such as ATEX.

Operating Parameters

- Flows to 420 m³/h (1850 US gpm)
- Heads to 160 m (525 ft)
- Pressures to 25 bar (365 psi)
- Temperatures from -40°C (-40°F) to 250°C (480°F)

Precision Cast Semi-Open Impeller delivers high efficiency performance, low NPSHR, low running cost and long life

High Performance Rare Earth Magnets possess superior permanent strength and proven reliability

Large Inner Magnet Clearances of 1.5 mm (0.06 in) between shell and inner magnet assembly ensure effective cooling

Reinforced PEEK Primary Containment Shell eliminates eddy current losses, enhancing efficiency

Hastelloy® Primary Containment Shell may be specified

Optimized Internal Flow Paths lubricate bearings and cool magnets

Upgrading of mechanically sealed to magnetically driven, sealless pumps is made easy due to the interchangeability between pump bearing frames

© Hastelloy is a registered trademark of Haynes International, Inc.

Standard Back Pullout for general maintenance and inspection.

Casing stays in-line and piping connections remain intact.

KW941 Pump Power Monitor displays actual power to the pump offering simultaneous protection from under-load and overload operating conditions.

Contained Back Pullout for drive end maintenance. Process fluid is fully contained; no

draining, purging or exposure to harmful process fluids.

Optional Secondary Containment Shell
A hydroformed Hastelloy secondary containment shell is available for added security in critical services.

Flow Circulation Path
Through analytical and practical research, Flowserve has developed a unique flow path analysis program to aid in the correct sizing of magnetically driven pumps.

The program calculates flow, temperature and axial thrust within the drive unit, allowing the pump liquid vapour point to be determined.

Using this data, Flowserve is able to appropriately select and size pumps, preventing liquid vapourization in the drive unit and the associated damage.

CPXSM
Close coupled configuration also available.

CPXM Close Coupled Pump

Space Saving Configuration

With pump ends conforming to ISO 2858 dimensional and technical standards and to ISO 5199 design criteria, the CPXM provides a compact, space-saving arrangement ideal for industrial processes or installations when space is at a premium.

CPXM pumps are fitted with standard, readily available electric motors so the user can choose an enclosure to suit the application.

Operating Parameters

- Flows to 570 m³/h (2500 US gpm)
- Heads to 125 m (400 ft)
- Pressures to 25 bar (365 psi)
- Temperatures from -20°C (-5°F) to 160°C (320°F)

Applications

- Acid transfer
- Caustic and chlor-alkali
- Man-made fibers
- Polymers
- Slurry processing
- Solvents
- Volatile organic compounds
- Waste processing

Standards Compliance

The CPXM is CE marked and compliant with applicable European directives, such as ATEX.

Radiating Surfaces dissipate heat and extend bearing and mechanical seal life

External Impeller Adjustment can be carried out without taking measurements

Heavy-Duty Casing with integral foot and multi-ribbed discharge flange provides superior resistance to pipe loads

Close Coupling eliminates influence of the baseplate and foundation on alignment

Optional Secondary Seal controls leakage in the event of primary seal failure, providing increased safety and reduced pump downtime

Available with most of the standard and optional features of the CPX ISO frame mounted pump

Benefits of CPX Close Coupling Design

- Permits use of readily available standard electric motors
- Provides a thermal barrier between pump and motor
- Reduces installation cost by eliminating pump to motor alignment
- Serves as an additional deflector between mechanical seal and motor

Other Configurations

CPXRM

Close coupled, recessed impeller pump

CPXPM

Close coupled, self-priming pump

CPXSM

Close coupled, magnetic drive pump

CPXM

**CPXP
Self-Priming
Pump**

Surface Mounted Design
Costing less to buy, install and maintain than submersible pumps, the CPXP self-priming pump is designed to draw from liquid sources below ground level or from sources with no positive pressure to naturally prime the pump. Its compact

design enables it to fit in tight clearance locations. It can be easily mounted on a trailer for movement to various pumping locations such as wastewater lagoon service.

Standards Compliance
The CPXP is CE marked and compliant with applicable European directives, such as ATEX.

Operating Parameters

- Flows to 250 m³/h (1100 US gpm)
- Heads to 130 m (425 ft)
- Pressures to 25 bar (365 psi)
- Temperatures from -80°C (-110°F) to 350°C (660°F)

Applications

- Sump service
- Tanker unloading
- Marine and river extraction
- Wastewater and effluent
- Dewatering
- Vessel transfer

One-Piece Casing has large priming chamber, air separator and volute in one integral component, keeping components to a minimum

Semi-Open Impeller delivers high efficiency performance, low NPSHR and good solids handling

Reflux Priming Principle eliminates the need for internal valves and external priming devices

Suction Run Dry Capability allows for minimum supervision

The Reflux Priming Principle

The CPXP self-priming pump operates on the reflux principle, using liquid recirculation to prime the pump. The pressure differential between the aerated liquid at the impeller and the

non-aerated liquid in the priming chamber creates a vacuum that pulls liquid up the pipe.

This principle eliminates the need for both internal valves and external priming devices or foot-valves. As a result, CPXP is ideal for suction lift applications or where a process involves pumping a liquid with air or gas phases.

CPXP

Semi-Open Impeller
for high efficiency, low NPSHR and good solids handling.

Advanced Technology 45° Conical Seal Chamber with integral flow modifiers redirects solids and slurry away from seal and back into the flow path of the process liquid, extending seal life and improving pump reliability.

Additional Configurations

- **CPXPM**
Close coupled, self-priming pump
- **CPXPS**
Magnetically driven, self-priming pump
- **CPXPMSM**
Close coupled, magnetically driven, self-priming pump

**CPXR
Recessed
Impeller Pump**

Low-Shear Pumping

The CPXR recessed impeller pump provides low-shear pumping of friable solids and trouble-free pumping of stringy or fibrous slurries. It combines the state-of-the-art hydraulics of the CPX with the vortex action of a recessed impeller.

The CPXR has a wide clearance at the front of the semi-open impeller allowing passage of larger particles. Solids are drawn into the vortex of swirling liquid and discharged by centrifugal force through the open area in front of the impeller with little contact, minimizing particle degradation. Furthermore, the air and gas handling capability of the pump is improved.

Operating Parameters

- Flows to 750 m³/h (3300 US gpm)
- Head to 100 m (330 ft)
- Pressures to 25 bar (365 psi)
- Temperatures from -80°C (-110°F) to 350°C (660°F)

Applications

- Light slurries
- Corrosive/erosive services
- Large diameter solids
- Waste streams
- Shear-sensitive fluids
- Friable solids
- Fibrous materials

Standards Compliance

The CPXR is CE marked and compliant with applicable European directives, such as ATEX.

Advanced 45° Conical Seal Chamber with integral vortex flow modifiers increases mechanical seal life

Standard Non-Contacting Labyrinth Seals keep lubricant in and contaminants out

Heavy-Duty Pump End and Drive End Bearings selected for long life and reliability

Vortex Action causes only a fraction of the media to contact the impeller, minimizing abrasive wear and maintaining solids integrity

Benefits of the CPXR

- Improved solids handling
- Improved air and gas handling
- Improved ability to pass fibrous or stringy materials
- Reduced wear

Other Features

- Back pullout design
- Non-contacting labyrinth seals
- Bosses for inlet and outlet pressure gauges

Precision Cast, Semi-Open Impeller delivers high efficiency performance, low NPSHR and long life.

- Backvanes and shroud cutouts for axial balance extend seal life and bearing reliability
- Impeller is screwed to the shaft for high strength and improved shaft end corrosion resistance

Additional Configurations

- **CPXRV**
Recessed impeller, vertical pump
- **CPXRM**
Recessed impeller, close coupled pump

CPXRM

**CPXV
ISO & API
Vertical Sump
Pump**

Vertical Sump Pump

The Flowserve CPXV is a vertical sump pump incorporating state-of-the-art hydraulic design for efficient and reliable service.

The CPXV can be customized to meet a wide range of needs. Compliant with ISO 5199, the CPXV is available in 40 hydraulic wet-ends and a wide variety of materials of construction. It is also available with multiple mechanical seal options and sump depths.

The CPXV is also available in an API 610 compliant version.

Operating Parameters

- Flows to 1400 m³/h (6160 US gpm)
- Heads to 250 m (820 ft)
- Temperatures from -40°C (-40°F) to 350°C (660°F)
- Pressures to 25 bar (365 psi)
- Speeds to 4700 rpm

Modular Construction ensures installation flexibility with a standard column length of 0.5 m (1.6 ft), which equates to a minimum sump depth of 0.7 m (2.3 ft)

Additional Column Lengths are provided up to a maximum of 10 m (32 ft)

Heavy-Duty Thrust Bearings with axial adjustment made at soleplate level

Recessed Impeller version is available for enhanced solids handling capability

Suction Strainer optional

Fully Jacketed version is available for molten sulfur applications

API 610 Configuration

The Flowserve CPXV vertical sump pump is also available in an optional API 610 compliant model, specifically engineered for the hydrocarbon and petrochemical processing industries.

Rectangular or circular soleplates are standard. A full ANSI 150/300 lb RF soleplate is optional.

Standards Compliance

The CPXV is CE marked and compliant with applicable European directives, such as ATEX.

Bearing Options

Thrust Bearings are heavy-duty grease lubricated or sealed-for-life. Either allows axial adjustment at the soleplate.

Radial Bearings can be flushed by product or from an external source and are available in a variety of materials, including silicon carbide.

Couplings

- Flexible disc coupling available
- Spacer coupling available

Optional Spacer Coupling

Mechanical Seal Options

A variety of mechanical seal options are available, from simple vapour sealing to tandem cartridge.

Unbalanced Mechanical Seal

Balanced Mechanical Seal

Additional Options

- Recessed impeller
- Vapour/mechanical seal option
- Fully jacketed version
- Various motor enclosures
- Rectangular or circular soleplates
- Full ASME (ANSI) Class 150/300 RF soleplate
- Non-spacer coupling
- Oil lubrication to thrust bearing

**Flowserve
Pre-Engineered
Baseplate Designs**

Extend MTBPM and Reduce Maintenance Costs

The Flowserve family of pre-engineered baseplate designs further extends MTBPM by reducing internal pump stress and vibrations. That is why Flowserve recommends reinforced rigid baseplates.

Flowserve offers a broad range of metallic and non-metallic, grout and stilt mounted designs with standard options. This provides flexibility in choosing the baseplate that best meets application needs and operating budget.

Standard steel baseplate

Cast iron baseplate

PolyBase™ baseplate – foundation or stilt mounted

Reinforced baseplate – spring stilt mounted

Baseplate Materials

- Cast iron
- Steel
- Rolled steel
- Stainless steel
- Polymer concrete
- Solid polymer

Baseplate Options

- Stilt mounting
- Spring mounting
- Drain rims, pans, and connections
- Polycrrete mounts
- Motor feet adjusters
- Earthing points
- Baseplates to ISO 3661 and API 610 standards
- Inertia baseplates

Polybase™ – Solid Polymer Concrete Baseplate

- Low installed cost
- Superior vibration dampening
- Corrosion resistant
- Superior resistance to twisting or diaphragming
- Designed to be flat
- Available with or without catch basin and grout holes
- Inserts can be located to mount alternate equipment configuration requirements

**Flowserve
Polyshield
Polymer
Baseplate and
Foundation
System**

The Flowserve Polyshield baseplate and foundation system is the superior solution for cost effective, high performance pump installation. In one complete unit, it combines the traditional baseplate and formed concrete foundation for pump-drive sets.

Benefits of Selecting the Polyshield Baseplate and Foundation System

- Time savings
 - Quick installation time
 - Reduces time span from receipt at jobsite to commissioning
- Cost savings
 - Reduces total installed cost
 - Dramatically minimizes field rework necessary to meet specifications
- Better performance and reliability
 - Improved MTBPM
 - Reduced vibration
 - Improved corrosion resistance
- Single structure convenience
 - One-piece construction
 - Flat mounting surfaces
 - One-piece motor mounting block

The Polyshield baseplate and foundation system can be combined with numerous pump designs, including:

- ISO and ASME (ANSI) metallic and non-metallic
- Foot- and frame-mounted general industrial
- Foot-mounted between bearing
- API 610

Please see Bulletin PS-90-2 for more complete product information

- 50 Hz: to 95 m (310 ft)

GRP

GRP Non-Metallic Pump

The Flowserve GRP non-metallic pump is designed to ASME (ANSI) B73.5 M standards. Having corrosion resistance superior to more expensive, high alloy metals, the GRP costs only slightly more than ductile iron. The GRP pump has proven to be the low-cost, long-term solution in corrosive applications.

Operating Parameters

- Flows to 2500 m³/h (11 000 US gpm)
- Heads to 150 m (500 ft)
- Pressures to 17 bar (250 psi)
- Temperatures to 120°C (250°F)

- 60 Hz: to 300 m (985 ft)
- 50 Hz: to 200 m (655 ft)

Please see Bulletin P-10-500 for more complete product information

Mark 3 In-Line

The Mark 3 In-Line ASME (ANSI) pump, with its own independent bearing housing and rigid style motor adapter, remains one of the most reliable process pump designs available.

Nine sizes available

Capacities

- 60 Hz: to 370 m³/h (1630 US gpm)
- 50 Hz: to 290 m³/h (1280 US gpm)

Heads

- 60 Hz: to 140 m (460 ft)
- 50 Hz: to 95 m (315 ft)

Please see Bulletin PS-10-15 for more complete product information

Product literature available at www.flowserve.com

Engineered Pumps

ERP Centerline Mounted Process Pump

The ERP is the pump of choice for severe chemical, petrochemical, refining and heavy duty industrial service applications where full compliance with API 610 is not required.

Operating Parameters

- Flows to 1100 m³/h (4800 US gpm)
- Heads to 230 m (755 ft)
- Working pressures to 60 bar (870 psi)
- Temperatures to 350°C (660°F)

Please see Bulletin PS-10-20 for more complete product information

MSP Vertical In-Line Medium Speed Pump

Closely following API 610, 8th edition design criteria, the MSP vertical in-line medium speed pump is specifically designed for low flow, high head applications. Available in one and two stage designs.

Operating Parameters

- Flows to 25 m³/h (110 US gpm)
- Heads to 600 m (1970 ft)
- Pressures to 100 bar (1450 psi)
- Temperatures to 200°C (390°F)

Please see Bulletin PS-10-1 for more complete product information

HPX API 610 Hydrocarbon Processing Pump

Fully compliant with API 610, latest edition design criteria, the HPX pump is the workhorse of the hydrocarbon processing industry due to its unequalled versatility, reliability and hydraulic coverage. The most stringent emissions containment is achieved as the API 682 seal chamber accommodates all combinations of seal models and styles, including advanced barrier seal technology.

Operating Parameters

- Flows to 2000 m³/h (9000 US gpm)
- Heads to 350 m (1100 ft)
- Pressures to 80 bar (1160 psi)
- Temperatures to 450°C (850°F)

Please see Bulletin PS-10-5 for more complete product information

Flowserve Engineered Services is focused on providing customers with uncompromising service and support, where and when needed. Engineered Services is dedicated to delivering the highest quality support by integrating its extensive pump and materials engineering knowledge with creative service solutions. Engineered Services prides itself in understanding the business challenges facing customers and is prepared to manage solutions to succeed as a team.

A worldwide network of service and repair centers staffed by highly skilled engineers and technicians is available around the clock, seven days a week to respond to customer queries, to evaluate and troubleshoot problems and to provide reliable solutions.

Strength of Experience, Commitment to Excellence

Flowserve has long served industries requiring superior equipment performance and service life.

- Oil and gas production
- Hydrocarbon processing
- Chemical processing
- Water resources
- Power generation
- Nuclear
- Mining and mineral processing
- Pulp and paper
- General industry

Engineered Services is dedicated to maximizing equipment performance and providing reliability-centered maintenance programs for pumps and related equipment, regardless of manufacturer. Using the FlowStar™ asset management software, Engineered Services tracks performance and supports improvement programs using a service life cycle cost business approach. The results are improved reliability and increased profitability.

Your Business Partner

Flowserve partners with customers to respond to the dynamic business conditions that affect them. Flowserve will work with customers to drive efficiency, maximize throughput and control process quality. Whether your needs involve on-site technical assistance or broader project planning with full turnkey responsibility, you can rely on the strength of Flowserve Engineered Services to deliver professional, reliable results.
