Pressure and Temperature Limits

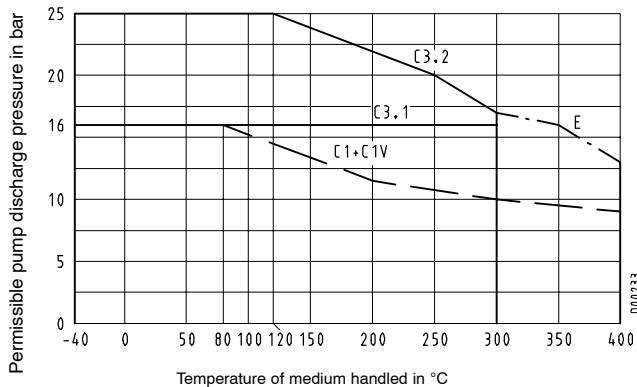

a) Where no special regulations apply (technical codes)

These pumps can be used for all liquids, except hot water and organic heat transfer media.

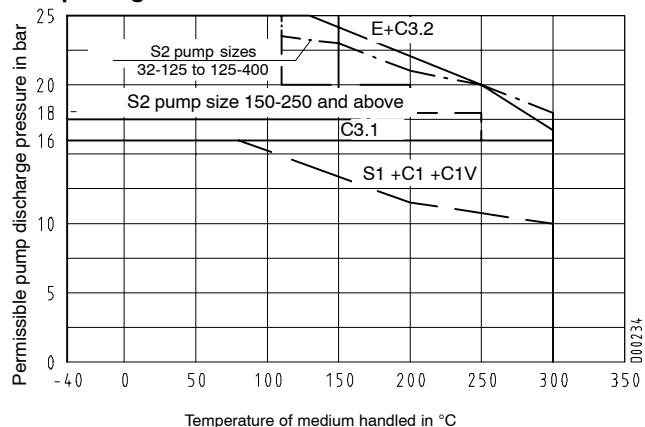

Material variants S1 and S2

Material variants C1, C3 and E

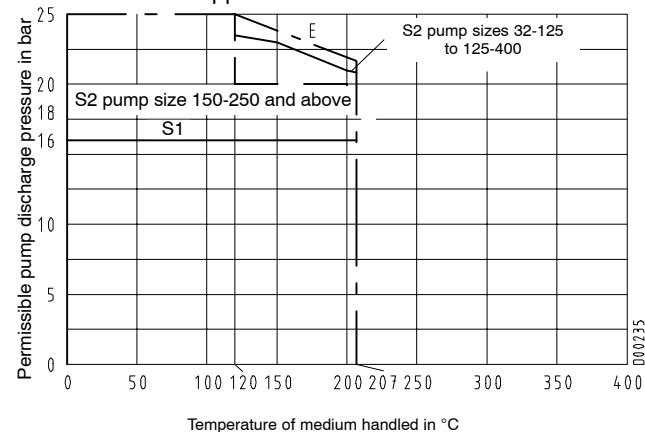

Pump design with conical seal chamber

b) Hot water applications

This applies to pumps not installed in hot water generation plants, i.e. pumps which are not subject to the regulations valid for such applications.

c) Where special regulations apply

In case of special regulations, different safety factors are required, which usually leads to a reduction of the limits stated in a).

Information about the revision of the application limits has to be requested for each individual case, stating the acceptance specifications.

d) Pressure and temperature limits for shaft seals

The application limits of shaft seals depend on the circumferential speed, the material and the medium handled.

They have to be checked in each individual case on the basis of the manufacturer's catalogues, taking into account the actual operating conditions.

- Double volute casing
 1) Casing cover with conical seal chamber possible
 2) CPK-C standard design without double volute
 3) CPK-E/S with double volute
- 4) CPK-E with double volute
 5) not as CPK-S
 6) design with conical seal chamber not possible on CPK-S

Casing

Radially split, consisting of volute casing (on CPK-S with casing wear ring) and casing cover.

Double volute depending on pump size.

The casing cover and the bearing bracket lantern form a chamber which can be used for heating or cooling with superheated steam or water, respectively (except for pump design with conical seal chamber).

Balancing

Axial thrust is balanced by back vanes on DN > 400 and sealing gap on both sides if impeller diameter > 500.

Shaft Seal

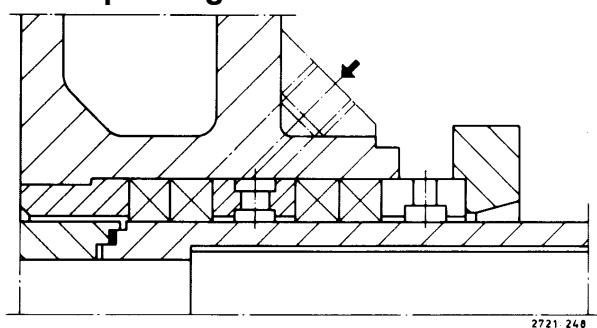

The shaft seal can be designed as a gland packing or as a mechanical seal.

Conversion from gland packing to single-acting mechanical seal and vice versa is possible without any rework on the casing cover by using the relevant replacement parts.

Commercially available mechanical seals in single- and double-acting design will be fitted. We use standardized mechanical seals of various makes in accordance with DIN 24 960 (design L₁K).

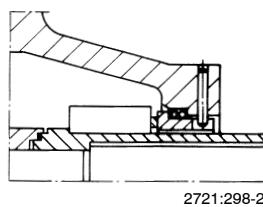

Single-acting mechanical seals may be fed with a quenching medium. Sealing against atmospheric influences is effected by means of a throttling bush, a shaft seal ring or a secondary mechanical seal.
