

# Volute Pumps

ZLI 25-125 . . . 150-200

## TECHNICAL DATA

Output:	max. 280 m³/h
Head:	max. 60 m
Speed:	max. 3600 1/min
Material:	grey cast iron: 0B, 0C, 0F stainless steel: 4B, 4F
Temperature:	material design 0B, 0C, 0F max. 120 °C 0F, 4F max. 80 °C
Casing pressure:	PN 16
Shaft seal:	standard mechanical seal
Flange connections:	DIN 2501 PN 16
Sense of rotation:	clockwise when seen from drive on the pump

## APPLICATION

Volute pumps of the series ZLI in inline design have been constructed as space saving and easy to install pumping units with standard motor. The pumps are used when clear resp. turbid liquids without any solid particles have to be pumped without problem.

The combination of:

- performance and connection size according to DIN 24255 / EN 733 and additional size DN 25
- construction type: INLINE design with standard motor
- material: grey cast iron, stainless steel
- casing: inline or volute casing (see list ZLK)

was leading to widely spread application fields like

- steel, machine and automobile construction
- food and semi-luxuries industry
- chemical and petrochemical industry
- pharmaceutical industry
- lacquer industry
- plastics and rubber industry
- iron and non-ferrous industry
- paper and pulp-industry
- textile industry

## DESIGN

Single -stage resp. two-stage pumping units in compact design with nominal performances according to DIN 24255 / EN 733 as well as additional size DN 25, where suction and discharge branch are arranged opposite to direct installment into the pipework.

There is no common shaft for motor and pump. The motors used are of the standard type listed.

Thanks to the process design it is possible to withdraw the whole insert unit without removing the casing of the pump from pipework. By means of the unit construction system of the additional size DN 25 the single-stage and the two-stage design have the same dimensions. The performance of the pump is optimally adapted to the service point by mounting and dismantling of a stage.

The individual shafts of the unit connected by a plug-in coupling facilitate the dismantling or the replacement of the motor without affecting the pump.

The programme comprises 13 pump sizes at present.

## CONSTRUCTION

### Casing pressure:

Material design  
4B, 4F max. 16 bar from -40 °C to 120 °C  
0B, 0C, 0F max. 16/10<sup>1)</sup> bar from -30 °C to 120 °C

### Please note:

Technical rules and safety regulations.  
Casing pressure = inlet pressure plus delivery head + zero flow

### Position of branches:

Suction and discharge branch radially arranged opposite to each other.

### Flanges:

The flanges correspond to DIN 2533/PN 16. Flange design drilled as per ANSI 300 is possible.

### Hydraulic:

First hydraulic. Designation of this construction type: A-  
Second hydraulic. Designation of this construction type: B-

### Bearing:

Two grease-lubricated antifriction bearings according to DIN 625 in the motor, one antifriction bearing grease-lubricated for service-life according to DIN 625 arranged in the bearing bracket. Designation of this construction type: -K, -V

### Sense of rotation:

Clockwise when seen from drive on the pump.

### Shaft sealing:

The shaft sealing is a single mechanical seal, flushed from internal source, uncooled and unbalanced.

Designation AAE: cast chrome / carbon, O-rings Perbunan temperature range: -40 °C to 120 °C

Designation BH3: SiC / carbon, elastomer EP temperature range: -20 °C to 120 °C

Designation BHS: SiC / SiC, elastomer Viton temperature range: -20 °C to 120 °C

## Material design

Item	COMPONENT	MATERIAL DESIGN					
		0B	0C	0F	4B	4F	
10.10 16.10	volute casing casing cover	GG 25			G-X 6 Cr Ni Mo 18 10	PPO, glass fiber reinforced synthetic	
23.00	impeller	GG 25	G-Cu Sn 10	PPO, glass fiber reinforced synthetic			
10.91 17.11	stage casing	see 0F, 4B, 4F	-	deep-drawn stainless steel sheet X 10 Cr Ni Mo Ti 18 10			
21.00	shaft	X 20 Cr 13			X 5 Cr Ni Mo 18 10		
34.00	bearing bracket	GG 25					
43.30	shaft sealing mechanical seal <sup>1)</sup>	X 22 Cr Ni 17 / carbon, Perbunan or SiC / SiC, Viton or SiC / carbon, EP			SiC / SiC, Viton or SiC / carbon, EP		

<sup>1)</sup> O-rings of PTFE upon request

The component parts of the mentioned material design 0B, 0C and 4B are interchangeable.

### Casing seal:

Material design 0B, 0C, 0F:

The casing seal consist of special paper flat gasket. Designation of this construction type: 2

Material design 4B, 4F:

The casing seal consist of PTFE. Designation of this construction type: 4

### Drive / speed:

By customary electric motors, type IM B 5 resp. IM V

For the determination of drive power we recommend the following additional power:

up to 4 kW: 25 %      4 up to 7,5 kW: 20 %      7,5 up to 37 kW: 15 %

**Please note:** the max. motor power allowed for some construction sizes as shown in the individual characteristic curves.

The following speeds are to be observed:

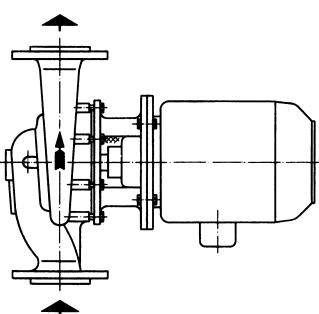

size	max. speed rpm	size	max. speed rpm
25-125 25-160 40-160    40-200 50-160    50-200 80-160    85-200 <sup>2)</sup> 100-160 <sup>2)</sup>	3600	100-200 150-200	3000

The max. speeds results from the admissible shaft load and from the permitted peripheral speed of the impellers.

<sup>2)</sup> in material design 4B max. speed 3000 rpm

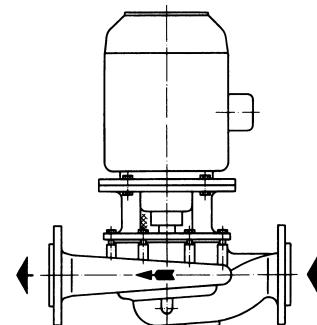

### Positioning

The ZLI-pumps can be mounted either horizontally or vertically into the pipe system with sufficient carrying capacity as follows, taking the drive power into consideration:

Horizontal installation up to 7,5 kW

For this particular

Vertical installation up to 7,5 kW possible, from 11 kW on necessary. The pump unit can be additionally supported for that purpose a threaded bore hole is provided in the pump casing (see dimension table).

### Please note

The installation of the motor below the pump is not allowed because of operation safety reasons.

The installation of compensators is not necessary. **Saving of costs!**

### General comments

For units in compact design with the same installation set consisting of bearing bracket with bearing, stub shaft and mechanical seal, casing cover, impeller and impeller fastener, please refer to our

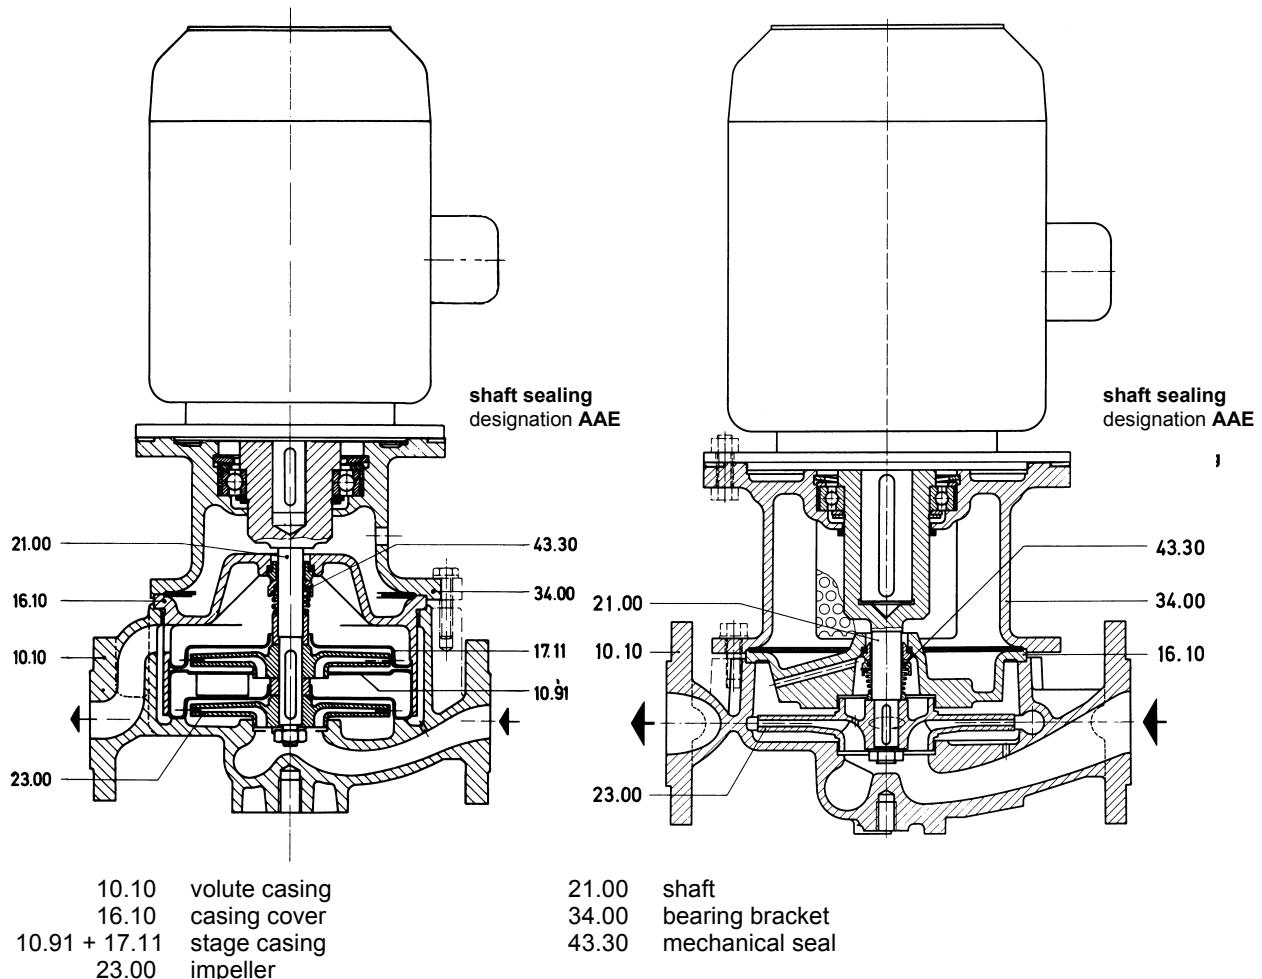

series ZLK

Technical documentation about these programmes will be readily supplied on request.

## Sectional drawing and nomenclature

ZLI 25-125  
ZLI 25-160

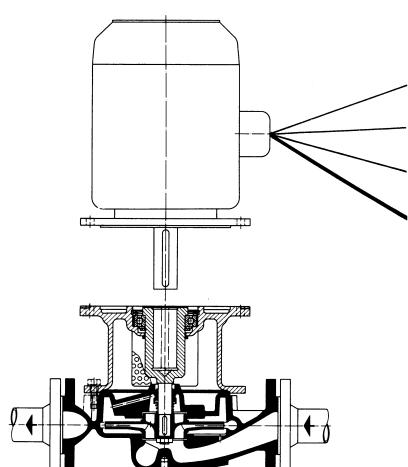

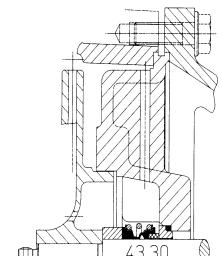

ZLI 40-160 ...  
ZLI 150-200

### Standard set of components / bearing bracket - plug coupling / standard motor\* / space requirement

By supplementing the standard set of components consisting of pump casing, casing cover, impeller and mechanical seal by a special bearing bracket (DBP) results an inline pumps which is easy to combine. The bearing bracket removes the standard motor from the load of hydraulic forces and allows suitable motor combinations at the complete mounted pumping unit.

**shaft sealing designation BH3 BHS**

#### motor combinations

- + type IM B 5 or IM V 1
- + type of enclosure IP 54 to ell (Ex)
- + speed 50 and 60 Hz
- = motor at your choice
- + shaft sealed pumping unit
- = readiness for operation

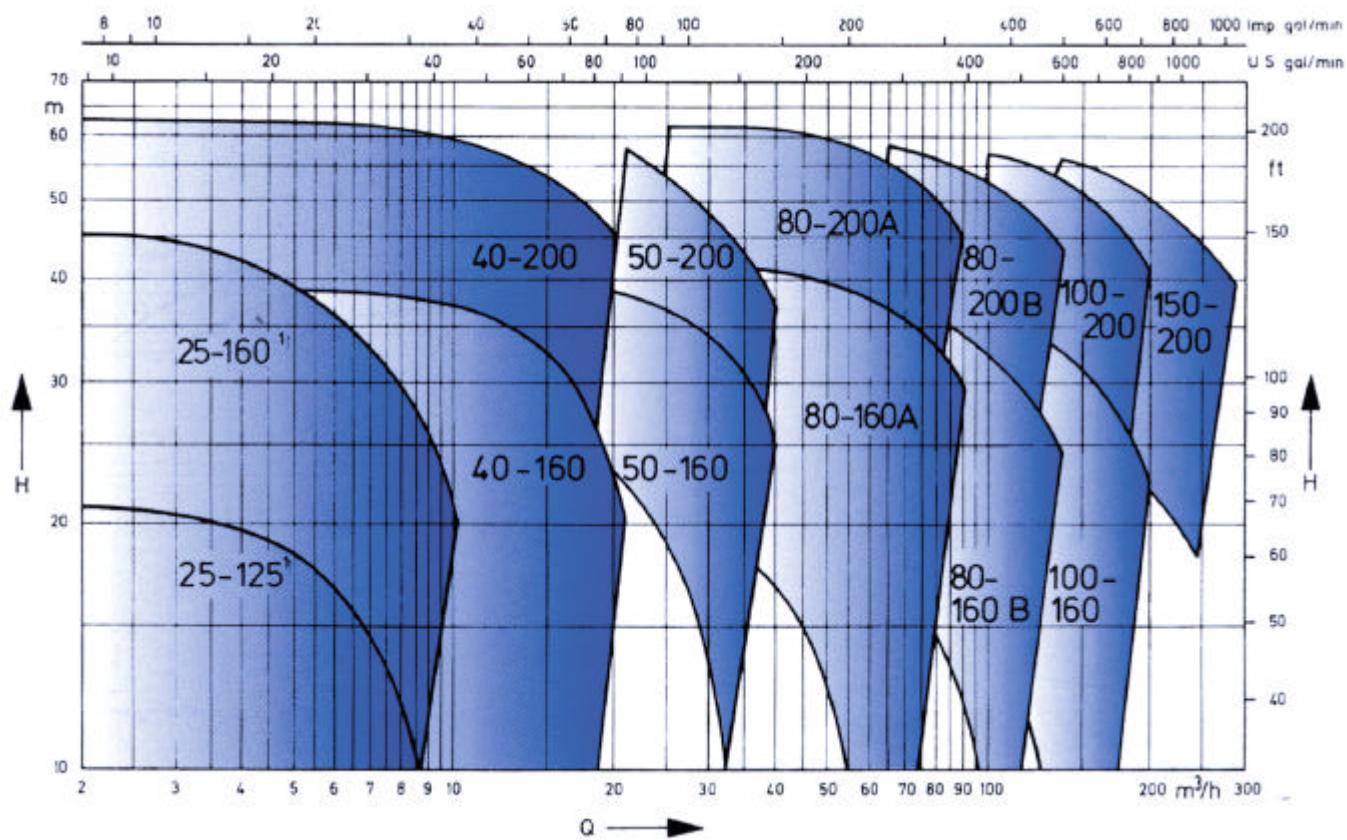

\* shaft end key

to DIN 748 T 3  
to DIN 6885 T 1

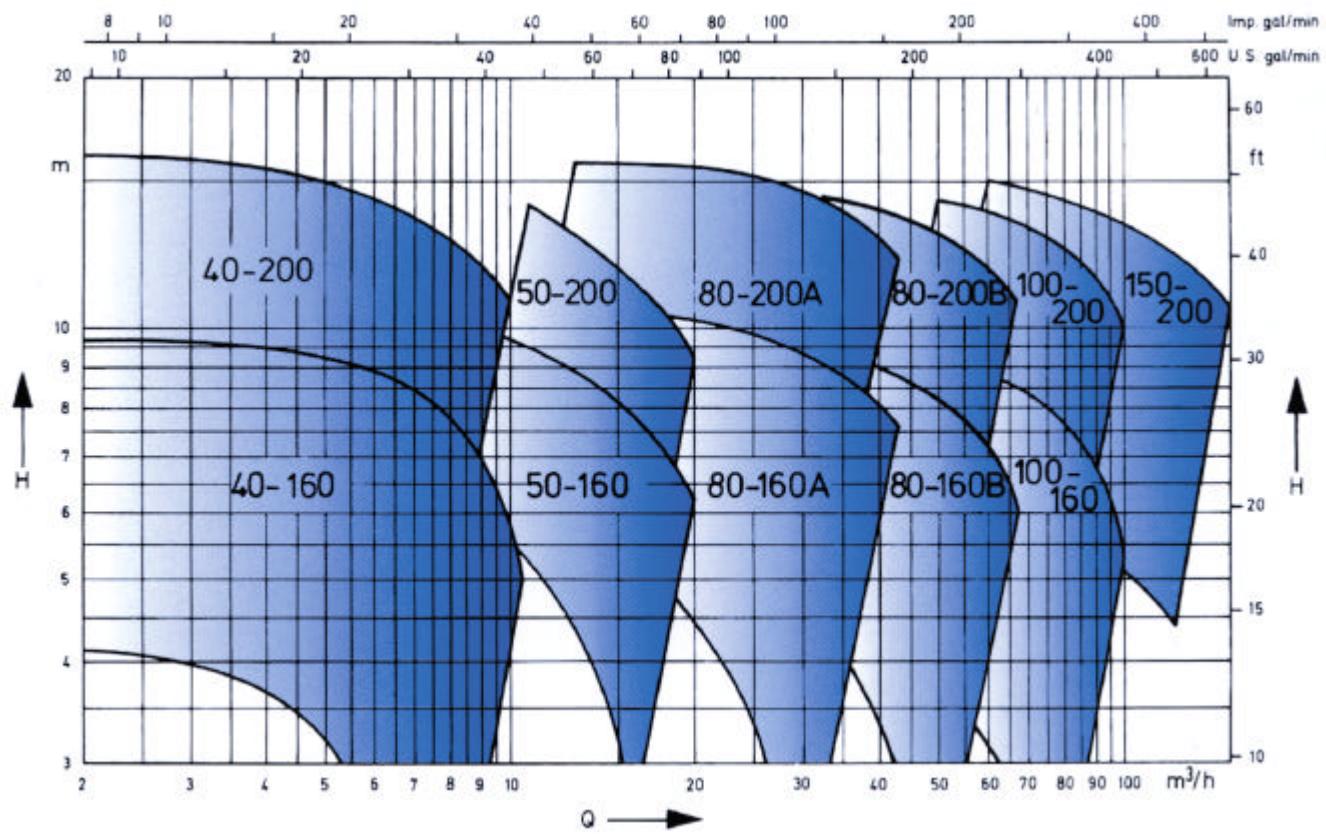

If necessary the motor can be changed in the unit without draining, the pipework. The pump unit remains as „**shaft tight armature**“ in the pipe work and so the readiness for operation is increased.
